

Time Lapse Photography

In this lesson, we'll be taking a look at
Time Lapse Photography.

If you see a magnifying glass at the bottom right corner of a photo, click on that photo to make it full screen.

Time Lapse Photography

Both iPhones and Android phones like the Samsung S7, and Google Pixel camera phones, allow you to take time lapse images.

Time lapse images are when the camera takes a photo every x seconds, and puts the resulting images together into a movie.

Time Lapse Photography

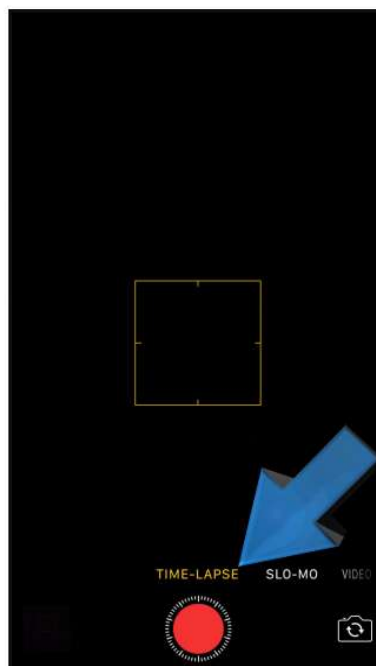

Time Lapse Photography

On the Samsung S7, this feature is called **Hyperlapse**. Start the camera app, tap the **Mode** button, and then select **Hyperlapse**.

Time Lapse Photography

On the iPhone, scroll the options above the camera shutter button, and select **TIME-LAPSE**.

Time Lapse Photography

Once selected, you just take a movie as you normally might. It might be of a fixed scene - it might be a movie where you move the camera around.

In general, this mode will condense ten seconds of video into around 1 second. So, a one minute video you take will take about 6 seconds to play back.

Time Lapse Photography

You've now completed this lesson.

In this lesson, we took a look at **Time Lapse Photography**.
