

360 Degree Photos

In this lesson, we'll be taking a look at
360 Degree Photos.

If you see a magnifying glass at the bottom right corner of a photo, click on that photo to make it full screen.

360 Degree Photos

Both iPhones and Android phones like the Samsung S7, and Google Pixel camera phones, allow you to take 360 degree photo, or photo compilations.

The way this works is quite simple - software on the phone guides you in taking a series of photos - turning in a 360 circle, in two or three turns (to allow sky and ground to be captured as well).

Here is the raw view of a 360 degree photo, taken on a Samsung S7 phone.

360 Degree Photos

360 Degree Photos

On the Samsung S7, this feature is called **Surround Shot**. Start the camera app, tap the **Mode** button, and then select **Surround Shot**.

360 Degree Photos

Once selected, your phone will guide you precisely - tell you which way to turn, and how to tilt your camera - until all required photos are taken.

360 Degree Photos

Once done, you'll be able to view an interactive 360 panorama of your photo(s) - as you can see below.

360 Degree Photos

You've now completed this lesson.

In this lesson, we took a look at **360 Degree Photos**.
