Sharing Photographs

In this lesson, we'll be taking a look at
Sharing Photographs.

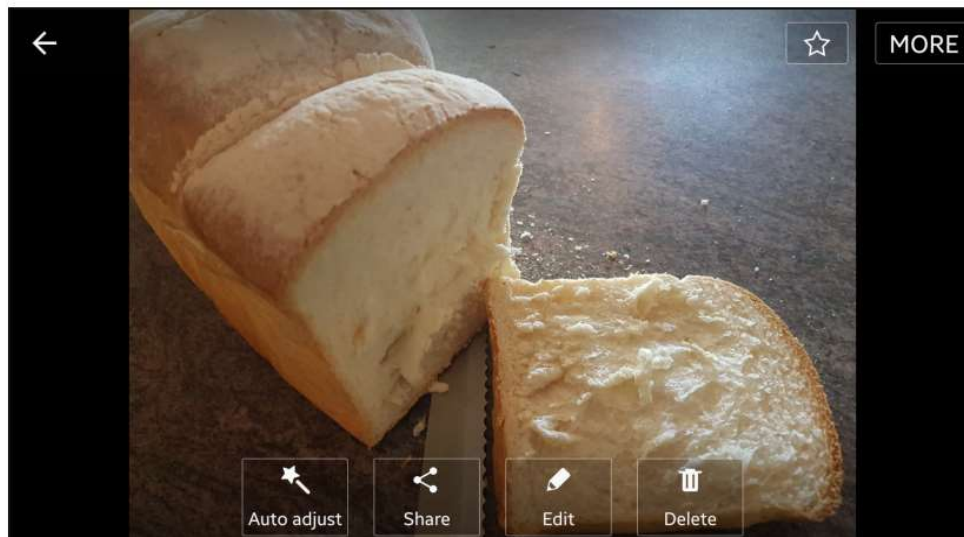

If you see a magnifying glass at the bottom right corner
of a photo, click on that photo to make it full screen.

Sharing Photographs

Every time you take a photo on your camera, it is stored on the camera, and perhaps uploaded to the cloud (see **The Cloud** lesson for more info).

But what about quicker and easier ways to share your photos with other people? Or with other apps?
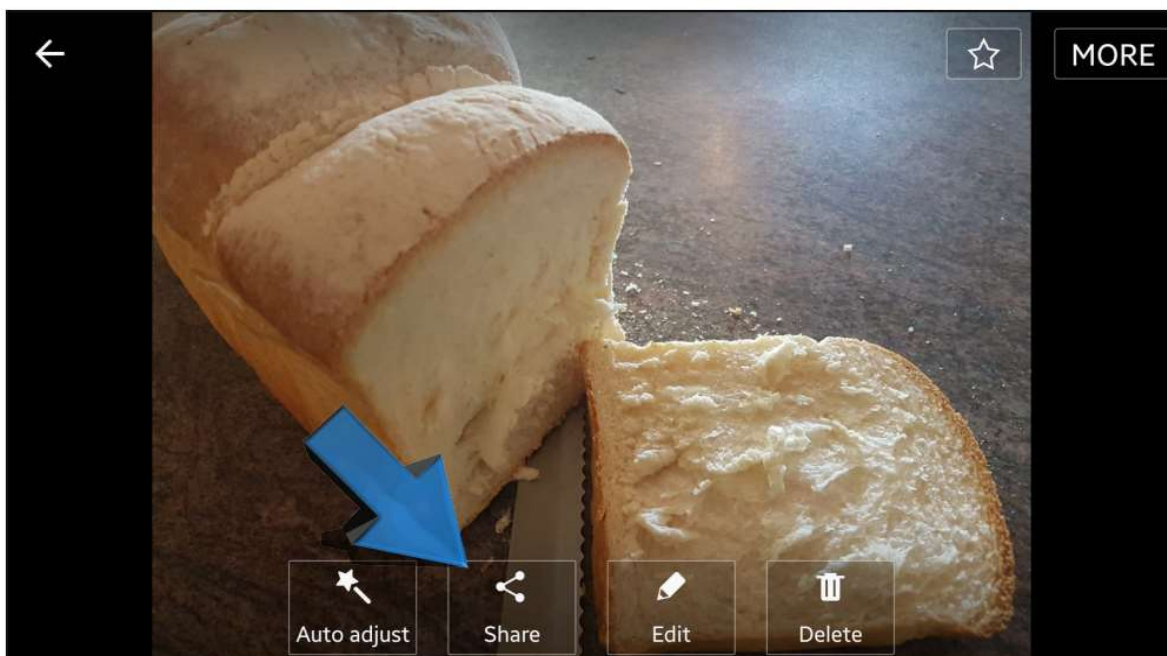

Sharing Photographs

Although the process is slightly different on each phone, and perhaps slightly different based on the app you use to view photos, the process is almost exactly the same.

First, view your photos in whatever app you like on your phone.

## Sharing Photographs

Next, locate and select the **Share** button.

Sharing Photographs

Next, you'll see a screen that allows you to select *whom* or *what* you want to to share this photo with. So it may be another person - it may be another app.

Sharing Photographs

You'll not only be able to select a person, but how you want to send them this image. It may be by MMS. It may be by email. It may be on their Instagram page. Below, we illustrate how it may look when we choose to share this image via email - the image is opened in your email program straight away, and all you have to do is add the names of the recipients.
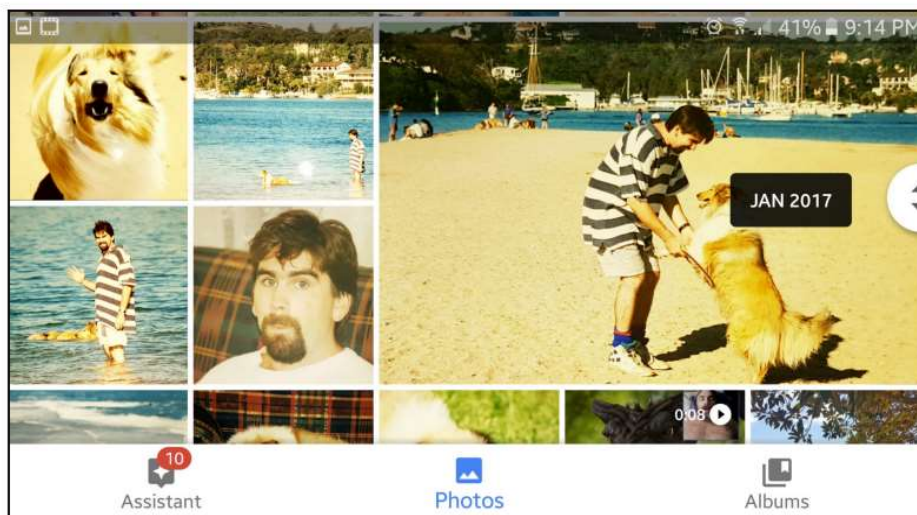

Sharing Photographs

You can share an image directly with another **app.** Below, we shared the photograph with a photo editing app - called **SnapSeed.** It proves to be a very quick way to edit photos in whatever app you like.

Sharing Photographs

In a lesson called **The Cloud,** we discuss the various photo backup programs - **Google Photos, OneDrive, iCloud, DropBox,** and more.
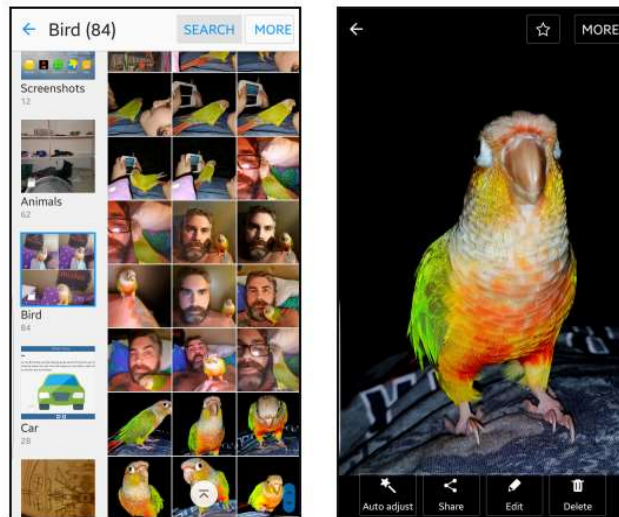

Each of these programs provides facilities to create photo albums - and make these albums easy to share online with others.
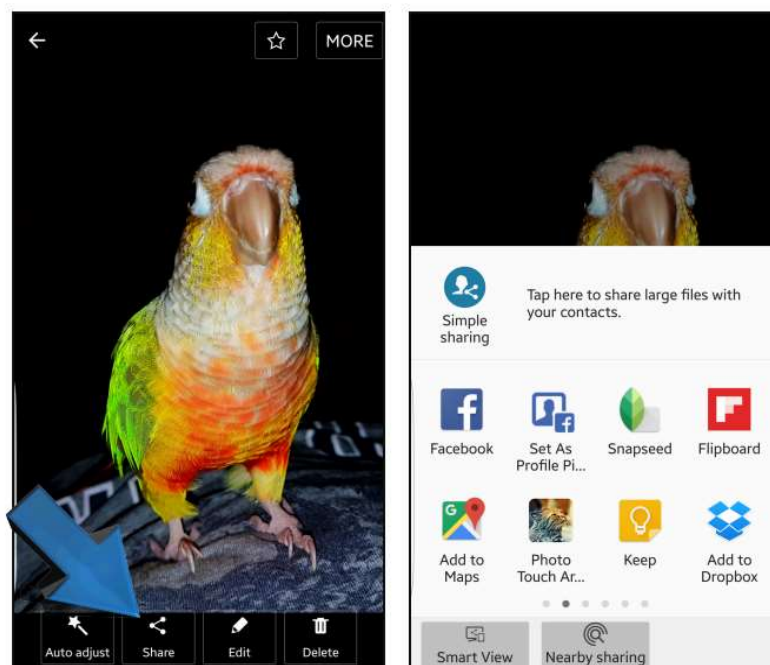

Sharing Photographs

Sharing to Social Media. There are a number of ways to share photos and other items to socail media sites, like Facebook. We'll look at probably the most simple way, below.

First, use the **Gallery** or **iPhoto** app to select and display a photograph you want to share on, for this example, Facebook.

## Sharing Photographs

Next, select the **Share** button or icon.
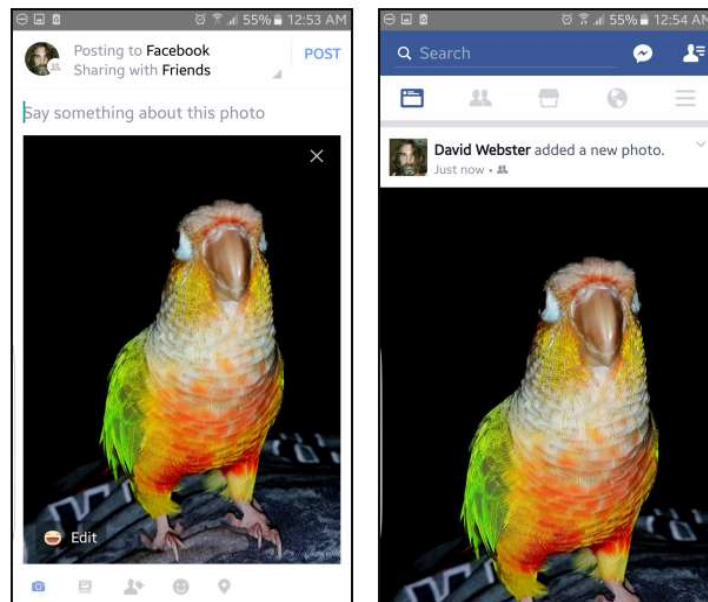

Sharing Photographs

Your phone will bring up a number of apps, social media sites, or users you can share this photo with. If you want to share with Facebook, for example, you will need to have the Facebook app installed on your phone.

In this case, we select **Facebook.**

Sharing Photographs

You'll then be presented with the Facebook screen, showing the photo, and allowing you to add a comment, and then post the photo - as we've done in the image on the right.

Sharing Photographs

Well done. You've now completed this lesson.

In this lesson, we took a look at **Sharing Photographs.**
